"Andrew Cervino Wood": Certified according to EN ISO 20345:2011: SB "Andrew Cervino Wood S3": Certified according to EN ISO 20345:2011: S3, SRC.

Overall assessment

Area of application

All forestry work with and without chainsaws in medium and difficult terrain.

Total wearing time during the study 1,067 days of use at 10 practical application sites (2020) and 208 days of use at 6 practical application sites in the follow-up test.

Feature	Result
Wearing characteristics	+
Durability	++/+
Features	++/+
Care	++/+
	Very good to good

++ = very good; + = good; o = satisfactory; - = adequate; - - = poor

Brief description from the wear test

Winter cut protection shoes

Crampon-compatible shoes for difficult terrain, mostly lightweight and comfortable. Good grip thanks to screw-in spikes . Particularly suitable in winter, as it insulates well in cold weather and keeps moisture out for a long time. Very warm in summer.

Individual details from the practical tests

Feature	Details (+)	Details(-)
Wearing characteristics	Comfortable to wear with good support in the shoe. Very good grip thanks to spikes. Breathable and good insulation against the cold in winter. Very waterproof upper material.	The weight of the shoe takes some getting used to. Upper material quite stiff at first, but okay after breaking in. Occasionally found to be not breathable enough and too warm, especially for summer.
Durability	Good durability of the upper material. Solid and robust work shoe.	The sole and spikes wear down significantly in some cases.
Features	Screw-in spikes. Good grip on terrain thanks to sharp sole edges. The lacing system was praised.	A few test subjects criticized the lacing, as the shoe had to be opened wide to put on and take off because the laces did not slide easily through the eyelets.
Care	Easy to care for and clean.	Poor self-cleaning of the tread on heavy ground. The insole had to be removed for drying. Thorough cleaning was made slightly difficult by the number of seams.

Certificates and declarations on social and environmental sustainability

The manufacturer provides the following certificates and declarations:

- No certificates available

Conclusion

The responsible technical committee of KWF e.V. has determined that the Arbpro " Cervino Wood" and " Cervino Wood S3" cut protection shoes are highly state-of-the-art within their field of application and are suitable for professional use in forestry work.
